

HOUSESTEADS ROMAN FORT, NORTHUMBERLAND

Risk Assessment for Discovery Visit Session

Activity: Murder at the Fort, Key Stage 2-3
 Duration: 90 minutes
 Created: 24 August 2021
 Review date: 24 August 2022
 Prepared by: Education Visits Officer (North East)

Description and Notes

This risk assessment covers the Murder at the Fort Discovery Visit from when the group meets the facilitator, to the time when the session ends. It does not cover the walk from the coach/car park to the site or any aspect of your visit outside of the Discovery Visit. This information can be found in the Hazard Information on our [Schools page](#).

Hazard	Who is at risk?	Control measures	Risk after controls C x L = R		
Slips, trips and falls from the furniture, bags and coats when using indoor storage	Leaders, students, EH staff and EH volunteers	Room will be inspected beforehand, any hazards removed, floor will be checked if wet. Students and leaders are briefed on how to store bags and coats. Visiting staff will be asked to supervise.	2	2	4
Uneven surfaces around the site, low stone foundations, and wooden staircases. The risk of trips, slips, falls.	Leaders, students, EH staff and EH volunteers	Students and leaders are informed of the hazards prior to walking on the site. Students are supervised at all times. Extra care to be taken in wet or windy weather. Verbal warnings are given to groups as appropriate.	3	1	3
High walls and sheer drops	Leaders, students, EH staff and EH volunteers	Students and leaders are advised of the hazard before the session and must be supervised at all times. Climbing on walls and over barriers is not permitted.	3	1	3
Handling objects and artefacts, including the use of banners whilst out on site. The risk of trips, slips, falls, nips and cuts.	Leaders, students, EH staff and EH volunteers	Students will follow guidelines for handling objects, always under adult supervision.	2	1	2
Zoonotic Hazards from livestock and other animals	Leaders, students, EH staff and EH volunteers	Students reminded to wash hands before eating to prevent ingesting bacteria.	2	1	2
Animal/rabbit burrows	Leaders, students, EH staff and EH volunteers	Regular pest control and site inspections. Students and leaders will be briefed on how to move around site.	2	2	4
Members of the public become involved in the session.	Leaders, students, EH staff and EH volunteers	Vigilance by session leader, members of the public acting inappropriately will be asked to move away from the group.	3	2	6

Severe/adverse weather conditions on site	Leaders, students, EH staff and EH volunteers	Site staff will advise of risks on the day and restrict access to areas of the site or the whole site as necessary.	2	1	2

Risk Assessments for Discovery Visits

Risk = consequence x likelihood in the context of a task i.e. when undertaking this task how bad could it be if it went wrong (almost regardless of whether it would) and what are the chances of it going wrong. They are both qualitative judgements based on objective data.

The Consequence Evaluation

The data you need to evaluate consequence (in the context of the task) are:

- Hazard - the thing with the potential to cause harm.

Consequence is graded on the three point scale where:

- 3 is death or life changing injuries
- 1 is first aid treatable injuries
- 2 is everything else.

The Likelihood Evaluation

Local knowledge/information will help judge the chances of the accident happening. It will include things like:

- Frequency and duration
- Numbers of people, vulnerable people
- The environment the activity is carried out in e.g. inside/outside, time of day, weather, distractions
- Accident/incident history
- Controls/supervision
- The equipment involved and its level of maintenance
- Anything else relevant to the likelihood evaluation.

It is not necessary to try to collect every piece of data that might have an effect on the likelihood; we just need to collect the most important pieces of data.

Likelihood is graded on the English Heritage three point scale where:

- 3 is almost certain to occur
- 1 means we would be surprised if the accident happened
- 2 is everything else.

Risk

Risk is calculated by multiplying the consequence rating by the likelihood rating giving potential risk ratings of:

- High (6 and 9)
- Medium (3 and 4)
- Low (1 and 2).
